Pune, Maharashtra, India

Summary

First and foremost, I love writing code. Ever since writing my first program in Java and manipulating it to produce the desired output. I have been obsessed with programming languages and how they work behind the scenes. I believe in the power of programming to improve the lives of people around the world.

This passion carried me through my education at Medi-caps. I studied new programming languages, algorithms, frameworks, and platforms, all with pretty much the same fascination that drove me as a kid. And it was here that I learned truly how much there was yet to learn.

So, now, in the IT industry, this passion remains with me. There's certainly yet more to learn, yet more problems to solve, and yet more to build. And for this, I am very grateful.

Skills: Node.js, Typescript, MongoDB, Javascript, AWS, Docker, Docker-compose, Git, Bitbucket, Gitlab, SVN.
